

Kavya Kanumuri

Software Developer • Full Stack • AI / ML

+91 7207550919 | Kanumurikavya03@gmail.com | Hyderabad, India

PROFESSIONAL SUMMARY

Software Developer at TFG Pvt. Ltd. with a B.Tech in Computer Science (CGPA 9.26). Skilled in full-stack development, machine learning, and computer vision. Built production-ready systems using Java, Python, and modern web technologies.

EXPERIENCE

Software Developer

TFG Pvt. Ltd. | March 2026 – Present | Hyderabad, India

- Contributing to full-stack development using Java and modern web technologies.
- Building and maintaining scalable enterprise-grade software solutions.

EDUCATION

Bachelor of Technology in Computer Science & Engineering

Bharath Institute of Higher Education and Research | 2020 – 2024

CGPA: 9.26 / 10

XII Board

Sri Chaitanya Junior College | 2018 – 2020

Percentage: 92.7%

SKILLS

Languages	Java, Python
Web Technologies	HTML, CSS, JavaScript, TypeScript, Angular
Database	MySQL
Tools	Postman, GitHub, Git, VS Code
Machine Learning & AI	NLP, TF-IDF, SVM, Logistic Regression, Model Evaluation
Computer Vision	OpenCV, MediaPipe, Real-time Gesture Recognition
CS Fundamentals	OOP, DBMS, DSA, REST APIs

CERTIFICATION

Java Full Stack

Edu Bridge | June – September 2025

- Completed an intensive Java Full Stack program covering backend development with Java and MySQL.
- Designed responsive web pages for booking, check-in, and check-out user flows.

Capstone Project: Hotel Management System

Java | MySQL | HTML | CSS

- Built a full-stack system handling room bookings, customer records, and billing.
- Designed user-friendly web pages for booking, check-in, and check-out workflows.

ACADEMIC PROJECTS

Virtual Mouse

[Python](#) | [OpenCV](#) | [MediaPipe](#) | [Computer Vision](#)

- Designed a gesture-controlled virtual mouse using Python, OpenCV, and MediaPipe for hands-free computer interaction.
- Enabled real-time hand tracking to perform move, click, and drag actions without any physical device.
- Aimed at improving accessibility for users with physical disabilities; tested across various environments.

Fake Review Detection System

[Python](#) | [NLP](#) | [TF-IDF](#) | [SVM](#) | [Logistic Regression](#)

- Built an ML pipeline to detect fake product reviews using Python and NLP techniques.
- Applied TF-IDF vectorization with SVM and Logistic Regression classifiers for text classification.
- Achieved high detection accuracy, improving trust and quality on online platforms.
